

The company MYLIFT s.r.o. is pleased to present a new "MYTime" system which, thanks to the combination of different MYLIFT systems, guarantees extremely functional and easily accessible product.

The "MYFloor" equipment is based on "PRG" series. It is a programmable system which after connecting to the elevator prolongs the time during which the doors remain open as the user requires.

The system is suitable especially in cases when the standard time is not sufficient. For example when unloaded or loaded materials or baggage, or need to clean the door.

The device is also useful because it often protects the door which are forcibly held open, which adversely affects their alignment.

Except the primary function it is possible to extend "MYTime" equipment for another ones. The main additional functions are:

- Status signaling via LED or backlight button for door opening
- Reset of the system by pressing the button for door closing or, if the button is missing, the button for door opening.
- Activation of the system by numeric code via control buttons.

The speed of assembly ensures almost continuous operation thus minimize the discomfort of the users caused by the shutdown of the elevator.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.

SYSTEM MYTime
