

The company MYLIFT s.r.o. is still looking for new solutions, and so we are pleased to present our new «MYBlue» system which thanks to modern technology provides a new way of using of the elevators.

The system composed of a variety of connected and programmed devices is able to manage a lot of functions of the elevator via the remote control or mobile phone equipped with Bluetooth and appropriate application.

Specific flexibility of the system allows its installation on different types of elevators, both old and new ones, and thus improves their efficiency and moves them closer to the real needs of users.

The main functions of the «MYBlue» device are:

- Call to the one of the floors
- Send to the other floors
- Hold the open door
- Eliminate external options
- Manage emergency lighting

The device can be easily modified for creating of another functions for elevators or other types of equipment.

The particular attention was paid to the design phase to obtain a product that guarantees fast installation, which together with cables prepared at our workplace ensures almost continuous operation, and so minimize the discomfort of user in case of elevator's shutdown.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
