

The company MYLIFT s.r.o. is pleased to present a new "MYCount" system which, thanks to a combination of different MYLIFT system, guarantees extremely functional and easily accessible product.

The "MYCount" equipment is based on the "PRG" series. It is a programmable system that when connected to the elevator it records its every move and counts how many times the cabin stops at different floors.

Except the primary function the "MYCount" equipment is possible to extend about another devices and functions. The main ones are:

- Exclude shaft options for one or more floors upon reaching the certain limit and/or certain pre-programmed time
- Issue a local warning when the certain limit is reached.
- Issue a remote warning when the certain limit is reached.

High memory and program capacity and elasticity of the system allows easy implementation into almost the all types of elevators, whether they are older types or elevators of other producers.

The speed of assembly ensures almost continuous operation thus minimize the discomfort of the users caused by the shutdown of the elevator.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
