

The company MYLIFT s.r.o. is pleased to present a new "MYFloor" system which, thanks to the combination of different MYLIFT systems, guarantees extremely functional and easily accessible product.

The "MYFloor" equipment is based on "PRG" series. It is a programmable system which after connecting to the elevator prevents access of person who does not have a password to some or all the floors.

Except the primary function it is possible to extend the "MYFloor" equipment for another ones. The main additional functions are:

- Require password for one or more floors for certain time or permanently
- Activate/deactivate the system by enter of administrator password
- Activate/deactivate the system by local or remote order
- Display of equipment code and status

Another important aspect of the "MYFloor" equipment is that it does not need additional buttons, but it is connected to the cabin controls, so it radically reduce the possibility of damage or evading.

High memory and program capacity and elasticity of the system allows easy implementation into almost the all types of elevators, whether they are older types or elevators of other producers.

The speed of assembly ensures almost continuous operation thus minimize the discomfort of the users caused by the shutdown of the elevator.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
