

The company MYLIFT s.r.o. is pleased to present a new "PRG" system which, thanks to the modern hardware and software together with sophisticated simulation systems ensures high versatility and reliability to face any requirements.

The "PRG" equipment is a programmable system which can execute any automatic operation, both small systems or complicated automations.

Based on many years of experience we have created a competitive product suitable for different types of installations, widely applicable and therefore economical.

Creating a system precedes a series of processes, namely:

- Functions analysis
- Hardware analysis
- Software analysis
- Production and assembly
- Programming
- Simulation
- Eventual installation

High memory and program capacity guarantee the excellent personalization, whether it is a hotel or an apartment house, or traction, without machine room or hydraulic elevators.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
