

The speed of intervention in case of persons get stuck in elevator is very essential. Therefore the new «HELPHY» system seeks possibility to make the technician arrival easier and faster and to reduce the discomfort of the user.

The variability together with meeting the requirements of applicable standards makes the «HELPHY» system suitable for both existing and new elevators, so it is widely used, and therefore economical and competitive.

New flexible and easily programmable device can be recessed into the cabin wall or mounted on its wall, it can be connected to a landline or can use a GSM gateway.

The modularity of the system enables to satisfy any needs from residential houses through hotels to the office buildings with reception.

Just pressing the button the device connects the telephone call-center MYLIFT and enable two-way communication between our staff and the user.

The speed of installation and updating ensures almost continuous operation, thus minimize discomfort of users caused by the shutdown of the elevator.

For more information contact our staff, we will be glad to prepare the customized solution suitable to your needs.
